Q-switched Nd: YAG LASER deperton ne ngjyren e tattoo-se duke e shkateruar ate nepermjet fototermolisis. Me pas ngjyra asimilohet nga trupi yne dhe tattoo-ja merr pamjen e venitjes nga dielli. Ky model laseri perdor dy gjatesi vale: 1064nm - per ngjyren e zeze dhe blu si dhe : 532nm- per ngjyren e kuqe, portokall dhe pink. Seancat e trajtimeve varen nga lloji i tattoo-ve (amatore, profesionale, aksidentale, etj); koha e berjes se saj; ngjyrat; tipi i lekures. Koha ndermjet seancave eshte 4-6 javë. ERASER eshte mjaft efektiv ne heqjen, njollave kafe te moshes, njollave te kuqe te lindura.

Dermals ERASER shkurton seancat e heqjes se tatuazheve dhe pigmenteve nga 5-10 here ne 2-4 here, zvogelon kohen e trajtimit dhe sherimit.

Mund te heq te gjitha llojet e pigmenteve dhe tatuazheve ne menyre efektive dhe te sigurt, sepse q-switch lazer perdor pozicionimin e sakte te terapise se synuar te indeve per te zvogeluar demtimin e lekures per te arritur efektin e njolles.
